"; GENE 145:115-120(1994).
                                                                                                                                                                "The nucleotide sequence of the H-1r gene of Salmonella rubislaw.";
NUCLEIC ACIDS RES. 14:8227-8227(1986).
-!- FUNCTION: FLAGELLIN IS THE SUBUNIT PROTEIN WHICH POLYMERIZES TO FORM THE FILAMENTS OF BACTERIAL FLAGELLA.
-!- INDIVIDUAL SALMONELLA SEROTYPES USUALLY ALTERNATE BETWEEN THE PRODUCTION OF 2 ANTIGENIC FORMS OF FLAGELLA, TERMED PHASE-1 AND PHASE-2, EACH SPECIFIED BY SEPARATE STRUCTURAL GENES.
-!- SIMILARITY: TO OTHER BACTERIAL FLAGELLINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- FUNCTION: THE S-LAYER IS A PARACRYSTALLINE MONO-LAYERED ASSEMBLY OF PROTEINS WHICH COAT THE SURFACE OF BACTERIA.
-!- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIA IS COVERED BY A S-LAYER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-JAN-1988 (REL. 06, CREATED)

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 35.164; Variance 168.905; scale 0.208

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The variant SLO can specifically recognise wild-type anti-SLO antibodies (ASO) but has no haemolytic activity. It can be used for the determination of previous and/or current infection by Streptococcus pyogenes. It enables ASO assays to become commercially viable and avoids the risk of handling haemo-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              wild-type Streptolysin O
Claim 7; Fig 2; 60pp; English.
The sequence is that of a soluble deriv. of Streptolysin O
with haemolytic properties which was obtd. from Streptococcus pyogenes
genomic library clone rSLO.3. It is useful in immunodiagnostic assays
which rely upon, e.g. the haemolytic properties of wild type
Streptolysin O. Recombinant Streptolysin O is obtd. more cheaply
than purified Streptolysin O obtd. from Streptococcus pyogenes.
Sequence 480 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Deriv. of streptolysin 0 with haemolytic activity - used in immuno-diagnostic assays which rely on haemolytic activity of wild-type Streptolysin 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pyogenes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               detecting antibodies in samples detecting antibodies in samples Disclosure; Fig 2; 9pp; English.

The SLO derivative contains no cysteine residues, with cytolytic activity giving resistance to inactivation by oxidation or thiol groups. Abs raised to the SLO may be used in the dection and diagnosis of Streptococcus pyogenes infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB; 010320.
Deriv. of thiol-activated protein streptolysin O - contg.
cysteine amino acid but retaining cytolytic activity, use

PSOLUBLE molecular complex for specific targetting of PN to cell -

rinternalises polynucleotide (PN) into endosome, then lyses endosome internalises polynucleotide (PN) into endosome, then lyses endosome to release PN into cell's cytoplasm

City The present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide is a listeriolysin o (LLO) haemolytic domain the present peptide in a soluble molecular complex, for the specific targetting of a polynucleotide (PN) to a cell. The complex comprises a PN, a colliber complex ising a pN binding agent and a cell specific binding agent, which binds to a surface mol. of the cell and is internalised into an endosome, and a bacterial component (i.e. the pN into cell's cytoplasm. The complex can be used therapeutically component of a PN to a cell in vivo, ex vivo or in vitro delivery of a PN to a complex can be used the present per cell in the present per cell in the present per cell per cell in the present per cell pe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The DNA may also contain flanking sequences that are potential sources of control elements for bacterial gene expression. Detecting a sequence encoding the protein can be used diagnostically, e.g. to detect a mutation for serotyping or classifying infectious agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treatment or prevention of infection, specifically caused by S. pneumoniae (particularly meningitis) but possibly also Helicobacter pylori (ulcers and gastric cancer). It may be of particular use before insertion of an in-dwelling device or any other invasive procedure. The protein, or nucleic acid encoding it, can also be used in vaccines to induce a cellular it, can also be used in vaccines to induce a cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Listeriolysin O; haemolytic; domain; streptolysin O; pneumolysi soluble molecular complex; specific; targetted; polynucleotide; endosome lysis; bacterial component; cytoplasm; therapeutic;

The claimed signal peptide encoding sequence (see tag e of T08695) is pref. operably linked at the 3' end to a protein encoding sequence. The protein is pref. the S-layer protein (see tag f of T08695). At the 5' end, the signal peptide encoding sequence is pref. linked to an expression control sequence, pref. the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid encoding signal peptide of Bacillus stearothermophilus S-layer protein - which has a lysine content of at least 10 per

Pepitope(s), useful as vaccines and adjuvants

Claim 1; Pages 9-14; 31pp; German.

Chapter protein, sbs-A. S-layer structures can be used as vaccines or adjuvants, particularly when they include a bacterial ghost that can additional epitopes in its membrane. Other uses of crecombinant sbs-A, depending on the nature of the inserted pepide, are as an universal carrier for biotinylated reactants for use in confidence immune responses (epitopes), as a reagent for removing cytokine or toxin from serum (antigenic epitopes), as a molecular cytokine or toxin from serum (antigenic epitopes), as a molecular confidence immune responses (epitopes), as a molecular cytokine or toxin from serum (antigenic epitopes), as a molecular cytokine or toxin from serum (antigenic epitopes), as a molecular cytokine or toxin from serum (antigenic epitopes), as a molecular cytokine or toxin from serum (antigenic epitopes), as a molecular cytokine 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                              by S.pneumoniae (particularly meningitis) but possibly also Helicobacter pylori (ulcers and gastric cancer). It may be of particular use before insertion of an in-dwelling device or any other invasive procedure. The protein, or nucleic acid encoding it, can also be used in vaccines to induce a cellular and/or humoral immune response, or to screen for other antibacterials. The DNA may also contain flanking sequences that are potential sources of control elements for bacterial gene expression. Detecting a sequence encoding the protein can be used diagnostically, e.g. to detect a mutation for

Claim 4; Page 53-57; 94pp; Japanese.

Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.

Helicobacter pylori nucleic acid sequences and encoded PT Helicobacter pylori nucleic acid sequences and encoded PT polypeptide(s) - useful in vaccines to treat or prevent H. pylori PT infection and for diagnosis of H. pylori infection PS Claim 14; Page 571; 1145pp; English.

CC This sequence is a H. pylori protein of unspecified function. PS Claim 14; Page 571; 1145pp; English.

CC The protein may be used in a vaccine to prevent or treat H. pylori protein of unspecified function. On the infection or to identify H. pylori polypeptide binding compounds, infection or to identify H. pylori polypeptide binding compounds. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC acid sequences complementary to the DNA act as antisense sequences and CC acid sequences complementary to the DNA act as antisense sequences and CC and distribution of H. pylori-specific antigens. The genomic sequence of CC H. pylori (ANCC 55679) was determined from overlapping contigs generated CC by mechanically shearing the bacterial DNA. The sequences were analysed for or ore of at least 180 nucleotides, and the predicted coding regions CC defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various or contigues of interest, particular regions can be isolated from H. pylori by PCR interest, particular regions can be isolated from H. pylori by PCR interest, particular regions can be isolated from H. pylori by PCR interest, particular regions can be isolated from H. pylori by PCR interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QΥ

S Claims 14,93; Page 730-731; 1145pp; English.

CC This sequence is a H. pylori cellular protein.

CC The protein may be used in a vaccine to prevent or treat H. pylori

CC infection or to identify H. pylori polypeptide binding compounds,

CC useful as potential H. pylori life cycle activators or inhibitors. The

CC DNA and probes derived from it may be used for the identification of

CC acid sequences complementary to the DNA act as antisense sequences and

CC acid sequences complementary to the DNA act as antisense sequences and

CC can be used to prevent the translation of H. pylori inRNA. Antibodies

CC and distribution of H. pylori-specific antigens. The genomic sequence of

CC and distribution of H. pylori-specific antigens. The genomic sequence of

CC by mechanically shearing the bacternial DNA. The sequences were analysed

CC defined by computer evaluation. To identify likely H. pylori antigens for

vaccine development, the amino acid sequences predicted from various ORF

vaccine development, the anino acid sequences predicted from various ORF

cc amplification for recombinant nolvpentide mroduction. An in F. Coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 3.2%;

               Claim 24; Page 25; 112pp; English.

The sequences given in Q50429-33 may be used for the detection of MTP or MTP inhibitors.

Bovine and human MTP are useful for the prevention, stabilisation or regression of atherosclerosis or for lowering the level of serum lipids such as serum cholesterol, triglyceride, phosphatidyl choline or cholesteryl ester in a mammalian species.

Diseases associated or affected by serum lipid levels, such as pancreatitis, hyperglycemia, obesity, etc., may be treated.
                                                                                                                                                                                                                                                                                                                                                       Nucleic acid sequence encoding sub-unit of MTP - used to express polypeptide for therapeutic use e.g. in reduction of obesity atherosclerosis etc.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Mon Aug 30 16:12:54 1999; MasPar time 20.74 Seconds 909.898 Million cell updates/sec

Tabular output not generated.

Title:

Description: Perfect Score: >US-09-120-044-4 (1-471) from US09120044.pep 3127

Sequence: 1 MANKAVNDFILAMNYDXXKL.....TISIWGTTLYPQVEDKVEND 471

Scoring table: PAM 150 Gap 11

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir60
1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 50.051; Variance 108.607; scale 0.461

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
